"How to activate and develop thought and memory from the Esoteric Sciences perspective" was the title of the lecture on Esoteric Sciences held at RHU theatre on Thursday, March 26, 2015. Hosting Engineer Nada Shehade Mouawad and Mr. Ziad Chehabeddine in the presence of Dr. Joseph B. Majdalani (JBM) the founder of Esoteric Sciences in Lebanon and the Arab World, the lecture shed light on two main constituents of the human being "thought" and "memory".

The lecture introduced Esoteric Sciences as an ancient knowledge that goes back in its origin to the very beginning of human existence. Its main concern is the whole being of man, its more specific field is the hidden and invisible constituents of the human being - not to merely shed light on them, but to put them also into practice, so that man realizes his existence and develops his hidden or dormant abilities. Two of the main constituents are thought and memory.

The Lecture elaborated on the different types of memory that are linked together and are inherent in every human being, and presented the practical application to stimulate memory activity, providing the attendees with practical exercises to strengthen and develop their memories, based on the esoteric book "Know your Memory" by Dr. Joseph B. Majdalani (JBM).

As for the Thought, the lecturers explained that it is the only link that binds the mundane self of tangible nature, to the incorporeal self of immaterial nature. This means opening up to the new expanding consciousness and exercising the intellect to think, analyze, discriminate and conclude.

An open discussion followed the presentation and the presenters mentioned that free lectures on Esoteric Sciences are held at the Esoteric Center in Hazmieh. Their website is www.esoteric-lebanon.org
